

ABSTRACT OF THE DISCLOSURE

An electrical outlet safety cover for covering the electrical connectors or connections on the sides of an electrical outlet. The safety cover includes a first panel and a second panel that are spaced apart from one another and connected to one another by a connecting section. A closure strap having a connector for attaching the closure strap to one of the panels is attached to the first or second panel, so that the electrical connectors on the sides of the electrical outlet are covered by the first panel and the second panel while these panels are retained over the electrical connectors by the cooperation of the connecting section and the closure strap when the closure strap is attached to the second panel.
